

R.S. PRECISION INDUSTRIES

## Creative EDM Solutions and Complex Parts

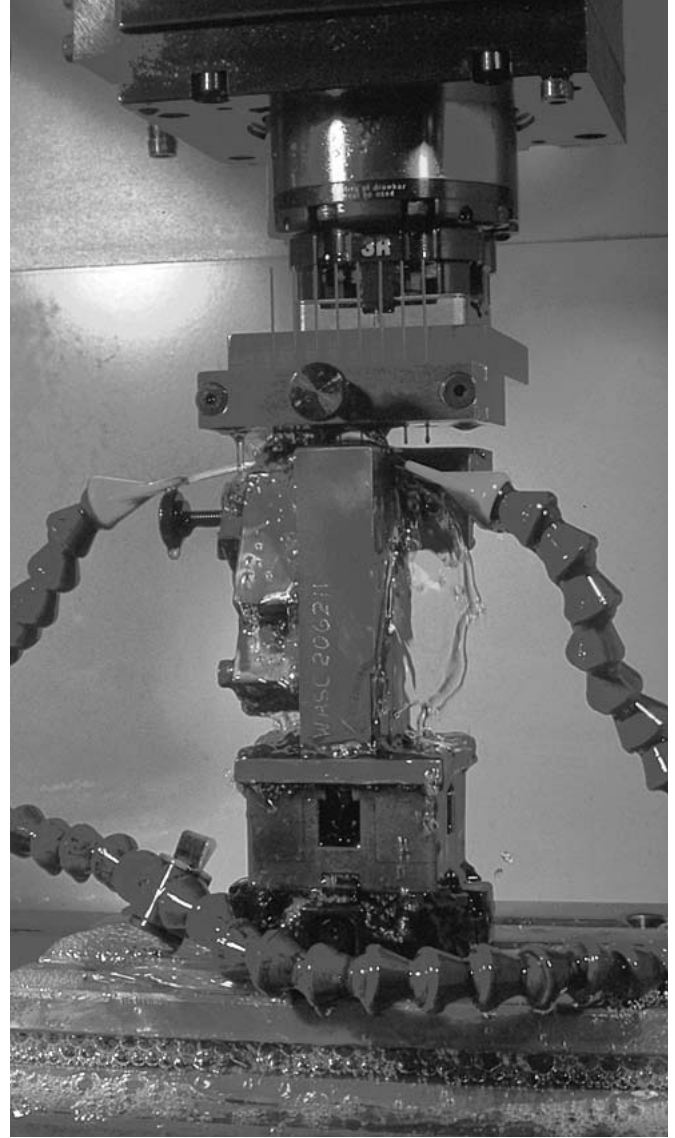

### Why EDM...

EDM is a non-traditional machining process that uses hundreds of thousands of tiny electrical sparks per second to remove precise amounts of metal in a very controlled manner. It can create any three dimensional geometry, including blind, sharp inside corners, very thin and fragile sections with no distortion, is burr-free, and is capable of cutting hardened steels and carbide with ease.

### Why RS Precision...

R.S. Precision has been meeting its customers' most demanding requirements for complex precision machined parts and EDM secondary operations for over 40 years. We deliver your critical parts on time, in tolerance, and at competitive prices.

- State-of-the-art AGIE 4 axis CNC sinker EDM's up to 20" x 30" x 14" travel for large parts
- State-of-the-art Mitsubishi Wire EDM
- CNC milling, turning and grinding
- Specialists in miniature precision parts
- Critical Deburring
- ISO-9001:2000 registered
- Sophisticated fixturing and engineering
- Automated video inspection and SPC

Now you've found the solution you've been looking for.

Call, fax or e-mail us for a prompt quotation on your next challenging job.
